

## AMENDMENTS TO THE CLAIMS

1. (Currently amended) A method comprising:

~~receiving at~~ transmitting to a wireless device associated with a first user a ~~communication~~ managed message from a computational entity;

~~that sends~~ transmitting the ~~communication~~ managed message to at least one other device associated with ~~a second~~ at least one other user from the computational entity, wherein the managed message includes at least one element from a group consisting of an RSVP element, a question element, a things-to-bring element, a comment element, a location element, a graphic card element, a recipient list element, and a ticketing element; [[and]]

~~transmitting~~ receiving, from at least one of the users, at least one payment transaction authorization associated with input responsive to the communication and the wireless device managed message, wherein the at least one payment transaction authorization includes at least one type from a group consisting of a pre-authorization type, an expiration date link type, an error type, a billing type, and a refund type; and

receiving an affirmative response in reply to the managed message from at least one of the users in response to a successful payment associated with the at least one payment transaction authorization.

2. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

accepting alphanumeric input [[to]] from the wireless device.

3. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

accepting voice input ~~[[to]]~~ from the wireless device.

4. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

~~transmitting~~ receiving alphanumeric input.

5. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

~~transmitting~~ receiving voice input.

6. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

~~transmitting~~ receiving a signal associated with input authorizing a credit card transaction.

7. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

~~transmitting~~ receiving a signal associated with input authorizing a debit card transaction.

8. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

~~transmitting~~ receiving a signal associated with input authorizing an automatic check handling transaction.

9. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

accepting user input associated with the at least one payment transaction authorization and entry of financial data.

10. (Previously presented) The method of Claim 9, wherein said accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

accepting near-real-time entry of credit card information.

11. (Previously presented) The method of Claim 9, wherein said accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

accepting near-real-time entry of debit card information.

12. (Previously presented) The method of Claim 9, wherein said accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

accepting near-real-time entry of automatic check handling information.

13. (Previously presented) The method of Claim 9, wherein said accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

accepting user input representative of a profile containing pre-stored financial data.

14. (Previously presented) The method of Claim 13, wherein said accepting user input representative of a profile containing pre-stored financial data comprises:

accepting user input representative of a profile containing pre-stored credit card information.

15. (Previously presented) The method of Claim 13, wherein said accepting user input representative of a profile containing pre-stored financial data comprises:

accepting user input representative of a profile containing pre-stored debit card information.

16. (Previously presented) The method of Claim 13, wherein said accepting user input representative of a profile containing pre-stored financial data comprises:

accepting user input representative of a profile containing pre-stored automatic check handling information.

17. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device comprises;~~ managed message comprises:

accepting input ~~[[to]]~~ from the wireless device in response to a presentation of a message through the wireless device.

18. (Currently amended) The method of Claim 17, wherein said accepting input ~~[[to]]~~ from the wireless device in response to a presentation of a message through the wireless device comprises:

presenting the message through a presentation device selected from a presentation-device group including a visual presentation device and an audio presentation device.

19. (Currently amended) The method of Claim 17, wherein said accepting input ~~[[to]]~~ from the wireless device in response to a presentation of a message through the wireless device comprises:

presenting a price through the wireless device.

20. (Original) The method of Claim 19, wherein said presenting a price through the wireless device comprises:

presenting the price in conjunction with at least one message-structure item.

21. (Original) The method of Claim 20, wherein said presenting the price in conjunction with at least one message-structure item comprises:

presenting the price in conjunction with a subject; a response option; a message body; at least one yes-no-type answer question; at least one numeric-response-type answer question; at least one verbal-response-type answer question; at least one multiple-choice-response-type answer question; at least one meeting date which can include either or both a day and a time; at least one meeting location; at least one meeting RSVP request; at least one event descriptor wherein the event descriptor can include a party, a breakfast, a lunch, a dinner, a movie, a game, a concert, or a miscellaneous occurrence; at least one event location; or at least one event RSVP request.

22. (Currently amended) The method of Claim 1, wherein said ~~transmitting~~ receiving, from at least one of the users, the at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

accepting input associated with the at least one payment transaction authorization through the wireless device having a browser selected from the browser group that includes a WML capable browser, a CHTML capable browser, a Pocket IE HTML capable browser, a Palm Query Application capable browser, and/or a voice XML capable browser.

23. (Currently amended) A system comprising:

means for ~~receiving at~~ transmitting to a wireless device associated with a first user a ~~communication from a computational entity that sends the communication~~ managed message and ~~for transmitting the managed message to at least one other device associated with a second at~~ least one other user, wherein the managed message includes at least one element from a group consisting of an RSVP element, a question element, a things-to-bring element, a comment element, a location element, a graphic card element, a recipient list element, and a ticketing element; [[and]]

means for ~~transmitting~~ receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message, wherein the at least one payment transaction authorization includes at least one type from a group consisting of a pre-authorization type, an expiration date link type, an error type, a billing type, and a refund type; and

means for receiving an affirmative response in reply to the managed message from at least one of the users in response to a successful payment associated with the at least one payment transaction authorization.

24. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for accepting alphanumeric input [[to]] from the wireless device.

25. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for accepting voice input ~~[[to]]~~ from the wireless device.

26. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for ~~transmitting~~ receiving alphanumeric input.

27. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for ~~transmitting~~ receiving voice input.

28. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for ~~transmitting~~ receiving a signal associated with input authorizing a credit card transaction.

29. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for ~~transmitting~~ receiving a signal associated with input authorizing a debit card transaction.

30. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means configured for ~~transmitting~~ receiving a signal associated with input authorizing an automatic check handling transaction.

31. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means for accepting user input associated with the at least one payment transaction authorization and entry of financial data.

32. (Previously presented) The system of Claim 31, wherein said means for accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

means for accepting near-real-time entry of credit card information.

33. (Previously presented) The system of Claim 31, wherein said means for accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

means for accepting near-real-time entry of debit card information.

34. (Previously presented) The system of Claim 31, wherein said means for accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

means for accepting near-real-time entry of automatic check handling information.

35. (Previously presented) The system of Claim 31, wherein said means for accepting user input associated with the at least one payment transaction authorization and entry of financial data comprises:

means for accepting user input representative of a profile containing pre-stored financial data.

36. (Previously presented) The system of Claim 35, wherein said means for accepting user input representative of a profile containing pre-stored financial data comprises:

means for accepting user input representative of a profile containing pre-stored credit card information.

37. (Previously presented) The system of Claim 35, wherein said means for accepting user input representative of a profile containing pre-stored financial data comprises:

means for accepting user input representative of a profile containing pre-stored debit card information.

38. (Previously presented) The system of Claim 35, wherein said means for accepting user input representative of a profile containing pre-stored financial data comprises:

means for accepting user input representative of a profile containing pre-stored automatic check handling information.

39. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ comprises; managed message comprises:

means for accepting input [[to]] from the wireless device in response to a presentation of a message through the wireless device.

40. (Currently amended) The system of Claim 39, wherein the means for accepting input [[to]] from the wireless device in response to a presentation of a message through the wireless device comprises;

means for presenting the message through a presentation device selected from a presentation-device group including a visual presentation device and an audio presentation device.

41. (Currently amended) The system of Claim 39, wherein the means for accepting input [[to]] from the wireless device in response to a presentation of a message through the wireless device comprises;

means for presenting a price through the wireless device.

42. (Previously presented) The system of Claim 41, wherein said means for presenting a price through the wireless device comprises:

means for presenting the price in conjunction with at least one message-structure item.

43. (Previously presented) The system of Claim 42, wherein said means for presenting the price in conjunction with at least one message-structure item comprises:

means for presenting the price in conjunction with a subject; a response option; a message body; at least one yes-no-type answer question; at least one numeric-response-type answer question; at least one verbal-response-type answer question; at least one multiple-choice-response-type answer question; at least one meeting date which can include either or both a day and a time; at least one meeting location; at least one meeting RSVP request; at least one event

descriptor wherein the event descriptor can include a party, a breakfast, a lunch, a dinner, a movie, a game, a concert, or a miscellaneous occurrence; at least one event location; or at least one event RSVP request.

44. (Currently amended) The system of Claim 23, wherein said means for receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication and the wireless device~~ managed message comprises:

means for accepting input associated with the at least one payment transaction authorization through the wireless device having a browser selected from the browser group that includes a WML capable browser, a CHTML capable browser, a Pocket IE HTML capable browser, a Palm Query Application capable browser, and a voice XML capable browser.

45. (Currently amended) A system comprising:

circuitry configured for receiving at transmitting to a wireless device associated with a first user a ~~communication from a computational entity that sends~~ managed message, the ~~communication~~ circuitry further configured for transmitting the managed message to at least one other device associated with ~~a second~~ at least one other user, wherein the managed message includes at least one element from a group consisting of an RSVP element, a question element, a things-to-bring element, a comment element, a location element, a graphic card element, a recipient list element, and a ticketing element and said circuitry is selected from an electrical circuitry group including electrical circuitry having at least one discrete electrical circuit, electrical circuitry having at least one integrated circuit, electrical circuitry having at least one application specific integrated circuit, electrical circuitry forming a general purpose computing device configured by a computer program, electrical circuitry forming a memory device, and/or electrical circuitry forming a communications device; [[and]]

circuitry configured for transmitting receiving from at least one of the users at least one payment transaction authorization associated with input responsive to the ~~communication~~ and the wireless device managed message, wherein the at least one payment transaction authorization includes at least one type from a group consisting of a pre-authorization type, an expiration date link type, an error type, a billing type, and a refund type and said circuitry is selected from an electrical-circuitry group including electrical circuitry having at least one discrete electrical circuit, electrical circuitry having at least one integrated circuit, electrical circuitry having at least one application specific integrated circuit, electrical circuitry forming a general purpose computing device configured by a computer program, electrical circuitry forming a memory device, and/or electrical circuitry forming a communications device; and

circuitry configured for receiving an affirmative response in reply to the managed message from at least one of the users in response to a successful payment associated with the at least one payment transaction authorization, said circuitry is selected from an electrical-circuitry group including electrical circuitry having at least one discrete electrical circuit, electrical circuitry having at least one integrated circuit, electrical circuitry having at least one application specific integrated circuit, electrical circuitry forming a general purpose computing device configured by a computer program, electrical circuitry forming a memory device, and/or electrical circuitry forming a communications device.

46. (Currently amended) A system comprising:

circuitry configured for transmitting a ~~communication~~ managed message to a wireless device associated with a first user;

circuitry configured for transmitting the ~~communication~~ managed message to a communications device associated with ~~a second~~ at least one other user; [[and]]

LAW OFFICES OF  
CHRISTENSEN O'CONNOR JOHNSON KINDNESS<sup>PLLC</sup>  
1420 Fifth Avenue  
Suite 2800  
Seattle, Washington 98101  
206.682.8100

circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message; and

circuitry configured for receiving an affirmative response in reply to the managed message from at least one of the users in response to the at least one payment transaction in response to the authorization being successful.

47. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with an alphanumeric input to the wireless device.

48. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with a voice input to the wireless device.

49. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with a credit card transaction.

50. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with a debit card transaction.

51. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with an automatic check handling transaction.

52. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with the at least one payment transaction and entry of financial data.

53. (Currently amended) The system of Claim 52, wherein said circuitry configured for receiving a signal associated with the at least one payment transaction and entry of financial data comprises:

circuitry configured for receiving a signal associated with near-real-time entry of credit card information.

54. (Currently amended) The system of Claim 52, wherein said circuitry configured for receiving a signal associated with the at least one payment transaction and entry of financial data comprises:

circuitry configured for receiving a signal associated with near-real-time entry of debit card information.

55. (Currently amended) The system of Claim 52, wherein said circuitry configured for receiving a signal associated with the at least one payment transaction and entry of financial data comprises:

circuitry configured for receiving a signal associated with near-real-time entry of automatic check handling information.

56. (Currently amended) The system of Claim 52, wherein said circuitry configured for receiving a signal associated with the at least one payment transaction and entry of financial data comprises:

circuitry configured for activating a profile containing pre-stored financial data.

57. (Currently amended) The system of Claim 56, wherein said circuitry configured for activating a profile containing pre-stored financial data comprises:

circuitry configured for activating a profile containing pre-stored credit card information.

58. (Currently amended) The system of Claim 56, wherein said circuitry configured for activating a profile containing pre-stored financial data comprises:

circuitry configured for activating a profile containing pre-stored debit card information.

59. (Currently amended) The system of Claim 56, wherein said circuitry configured for activating a profile containing pre-stored financial data comprises:

circuitry configured for activating a profile containing pre-stored automatic check handling information.

60. (Currently amended) The system of Claim 46, further ~~comprising~~; comprising:  
circuitry configured for transmitting a signal associated with presentation of a message through the wireless device.

61. (Currently amended) The system of Claim 60, wherein said circuitry configured for transmitting a signal associated with presentation of a message through the wireless device comprises:

circuitry configured for transmitting a signal associated with presentation of a price through the wireless device.

62. (Currently amended) The system of Claim 61, wherein said circuitry configured for transmitting a signal associated with presentation of a price through the wireless device comprises:

circuitry configured for transmitting a signal associated with presentation of the price in conjunction with at least one message-structure item.

63. (Currently amended) The system of Claim 62, wherein said circuitry configured for transmitting a signal associated with presentation of the price in conjunction with at least one message-structure item comprises:

circuitry configured for transmitting a signal associated with presentation of the price in conjunction with a subject; a response option; a message body; at least one yes-no-type answer question; at least one numeric-response-type answer question; at least one verbal-response-type answer question; at least one multiple-choice-response-type answer question; at least one

meeting date which can include either or both a day and a time; at least one meeting location; at least one meeting RSVP request; at least one event descriptor wherein the event descriptor can include a party, a breakfast, a lunch, a dinner, a movie, a game, a concert, or a miscellaneous occurrence; at least one event location; or at least one event RSVP request.

64. (Currently amended) The system of Claim 46, wherein said circuitry configured for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

circuitry configured for receiving a signal associated with said authorizing from a wireless device having a browser selected from the browser group that includes a WML capable browser, a CHTML capable browser, a Pocket IE HTML capable browser, a Palm Query Application capable browser, and a voice XML capable browser.

65. (Currently amended) A method comprising:  
transmitting a ~~communication~~ managed message to a wireless device associated with a first user;

transmitting the ~~communication~~ managed message to a communications device associated with ~~a second~~ at least one other user; [[and]]

authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message; and

receiving an affirmative response in reply to the managed message from at least one of the users in response to the at least one payment transaction in response to the authorization being successful.

66. (Currently amended) The method of Claim 65, wherein said authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

receiving a signal associated with a credit card transaction.

67. (Currently amended) The method of Claim 65, wherein said authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

receiving a signal associated with a debit card transaction.

68. (Currently amended) The method of Claim 65, wherein said authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

receiving a signal associated with an automatic check handling transaction.

69. (Currently amended) The method of Claim 65, wherein said authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message comprises:

receiving a signal associated with the at least one payment transaction and financial data.

70. (Previously presented) The method of Claim 69, wherein said receiving a signal associated with the at least one payment transaction and financial data comprises:

activating a profile containing pre-stored financial data.

71. (Previously presented) The method of Claim 70, wherein said activating a profile containing pre-stored financial data comprises:

activating a profile containing pre-stored credit card information.

72. (Previously presented) The method of Claim 70, wherein said activating a profile containing pre-stored financial data comprises:

activating a profile containing pre-stored debit card information.

73. (Previously presented) The method of Claim 70, wherein said activating a profile containing pre-stored financial data comprises:

activating a profile containing pre-stored automatic check handling information.

74. (Previously presented) The method of Claim 65, further comprising;  
transmitting a signal associated with presentation of a message through the wireless device.

75. (Previously presented) The method of Claim 74, wherein said transmitting a signal associated with presentation of a message through the wireless device comprises:

transmitting a signal associated with presentation of a price through the wireless device.

76. (Previously presented) The method of Claim 75, wherein said transmitting a signal associated with presentation of a price through the wireless device comprises:

transmitting a signal associated with presentation of the price in conjunction with at least one message-structure item.

77. (Previously presented) The method of Claim 76, wherein said transmitting a signal associated with presentation of the price in conjunction with at least one message-structure item comprises:

transmitting a signal associated with presentation of the price in conjunction with a subject; a response option; a message body; at least one yes-no-type answer question; at least one numeric-response-type answer question; at least one verbal-response-type answer question; at

least one multiple-choice-response-type answer question; at least one meeting date which can include either or both a day and a time; at least one meeting location; at least one meeting RSVP request; at least one event descriptor wherein the event descriptor can include a party, a breakfast, a lunch, a dinner, a movie, a game, a concert, or a miscellaneous occurrence; at least one event location; or at least one event RSVP request.

78. (Currently amended) A system comprising:

means for transmitting a ~~communication~~ managed message to a wireless device associated with a first user;

means for transmitting the ~~communication~~ managed message to a communications device associated with ~~a second~~ at least one other user; [[and]]

means for authorizing at least one payment transaction in response to an authorization from at least one of the users associated with the ~~communication and an input to the wireless device~~ managed message; and

means for receiving an affirmative response in reply to the managed message from at least one of the users in response to the at least one payment transaction in response to the authorization being successful.
